My Project

Data Center Implementation at Ethiopian Insurance Corporation (EIC)

Implementation of Data center For EIC is a key to maximize its product and customer satisfaction.

My Role: Data Center Administrator

Technologies Used: AWS

My key responsibilities are maintaining the integrity and efficiency of the data center. This responsibility includes reviewing, testing, and implementing all new systems and applications in the data center and ensuring all existing systems run efficiently daily. The other responsibilities

are for working with other IT professionals to ensure the development of more efficient new systems. And also oversee the daily operations of a company's computer network or system, ensuring that it remains available for use by employees or customers as required. They will also be responsible for providing all security policies are followed at all times.

Additionally I maintain and update hardware and software, implement data protection and recovery plans, and provide technical support to staff. And also I conduct research and analyses to establish the ideal practices and center layouts. This role requires knowledge of data and technology, as well as practical experience working with networks and data.
