What is P2P Exchange?

The exchange of assets at a market place between parties without the involvement of a central authority.

Peer-to-peer(P2P), takes a decentralized approach to interactions between individuals and groups.

This approach has been used in computers and networking (peer-to-peer file sharing), as well as with currency trading (virtual currencies)

Peer to Peer Trading allows buyers and sellers to negotiate on price before a coin/token is transferred.

It is basically alike an e-commerce type trading of coin/token and which has security over wallets which handles transaction on trading exchange.

- Transaction Censorship
- Cheaper Cost Of Operation
- Privacy Sustenance
- Seller's BTC are locked in Escrow till transaction is completed
- Individuals (buyers & sellers) are the only participants

Customized UI

PROS (P2P)

- Faster trading is the first and foremost advantage in P2P exchange
- Normal crypto currency exchanges are vulnerable whereas p2p exchanges are invulnerable.
- No need to pay for the third party as p2p exchange proceed to trade without any intermediate one. Thus the operation is cheaper.
- Privacy and security- stealing of funds will not occur as there will be no other people except the buyer and seller involved in trading.

P2P Architecture

All nodes are both clients and servers

- Provide and consume data
- Any node can initiate a connection
