Dynamic Liquidity Farming (DLF)

We are not engaged in volatile trading activities. With DLF Strategy we own a share of a global DeFi economy, swapping our shares across various pools within autonomous DMA (Decision Making Algorithm).

- Rotating liquidity across pools to maximize returns.
- We are not dependent on market volatility or direct trading.

Advantages:

- Collaboration with leading DeFi protocols.
- Stability against market fluctuations.

DefiLlama doesn't audit nor endorse any of the protocols listed, we just focus on providing accurate data. Ape at

Yield Rankings: Tracking 15711 pools over 459 protocols on 98 chains.

Dynamic Liquidity: The Road to a Billion

Our official mission is to reach \$1 billion in asset capitalisation. As our assets grow, investor returns will dynamically decrease to ensure sustainable development.

Key Points:

- Minimum returns at \$1 billion capitalization: 10% monthly.
- Until then, returns range from 20% to 30%, depending on the package.
- Balancing participant interests with system stability.
