NAZAR YEVDUCHENKO

SELECTED WORKS
& ARCHITECT PHILOSOPHY

Hello, There!

I am a third-year student at an architectural university. But in this short time I have already managed to work in several design firms. I am a native of Kyiv, but now I live in Lviv. During my work, I have managed to do both single-family and multi-family projects. From conceptual to more realistic projects.

PROJECT - 01

FRAME HOUSES

In this project, I designed 2 types of wooden frame houses. One smaller (36 m²) and one slightly larger (40 m²). These are holiday homes for short-term stays in a small company. They have toilets with showers, spacious storage cabinets, small kitchen areas, large beds and terraces (either with a tub or with lounge chairs).

TECHNICAL DETAILS

In this project, I designed 2 types of wooden frame houses. One smaller (36 m²) and one slightly larger (40 m²). These are holiday homes for short-term stays in a small company. They have toilets with showers, spacious storage cabinets, small kitchen areas, large beds and terraces (either with a tub or with lounge chairs).

PROJECT - 02

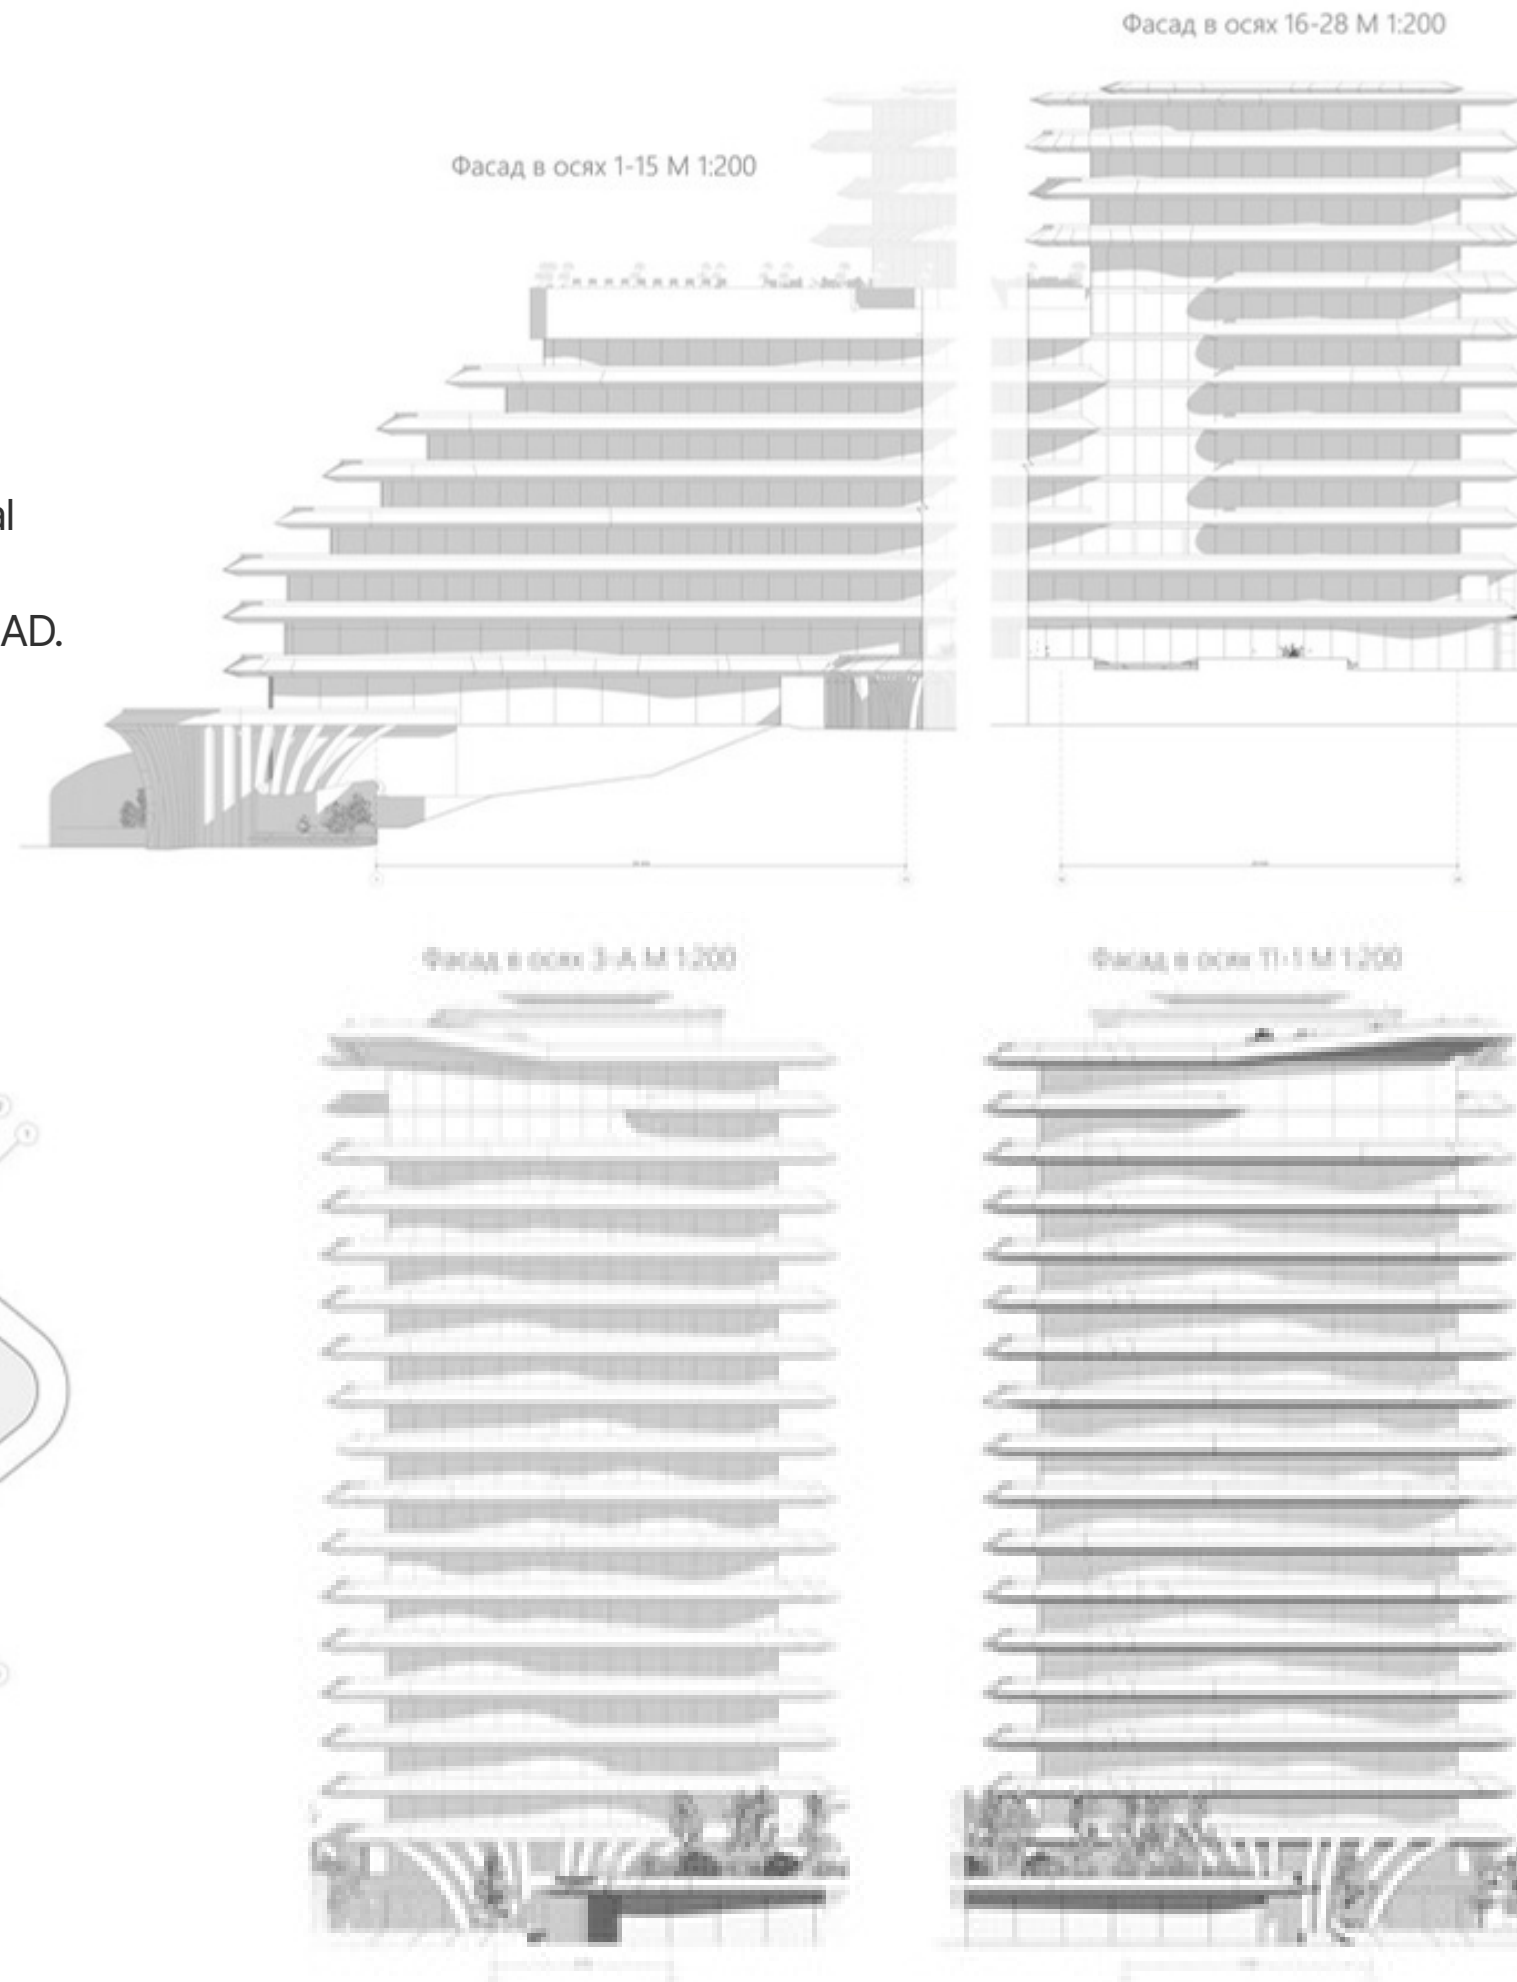

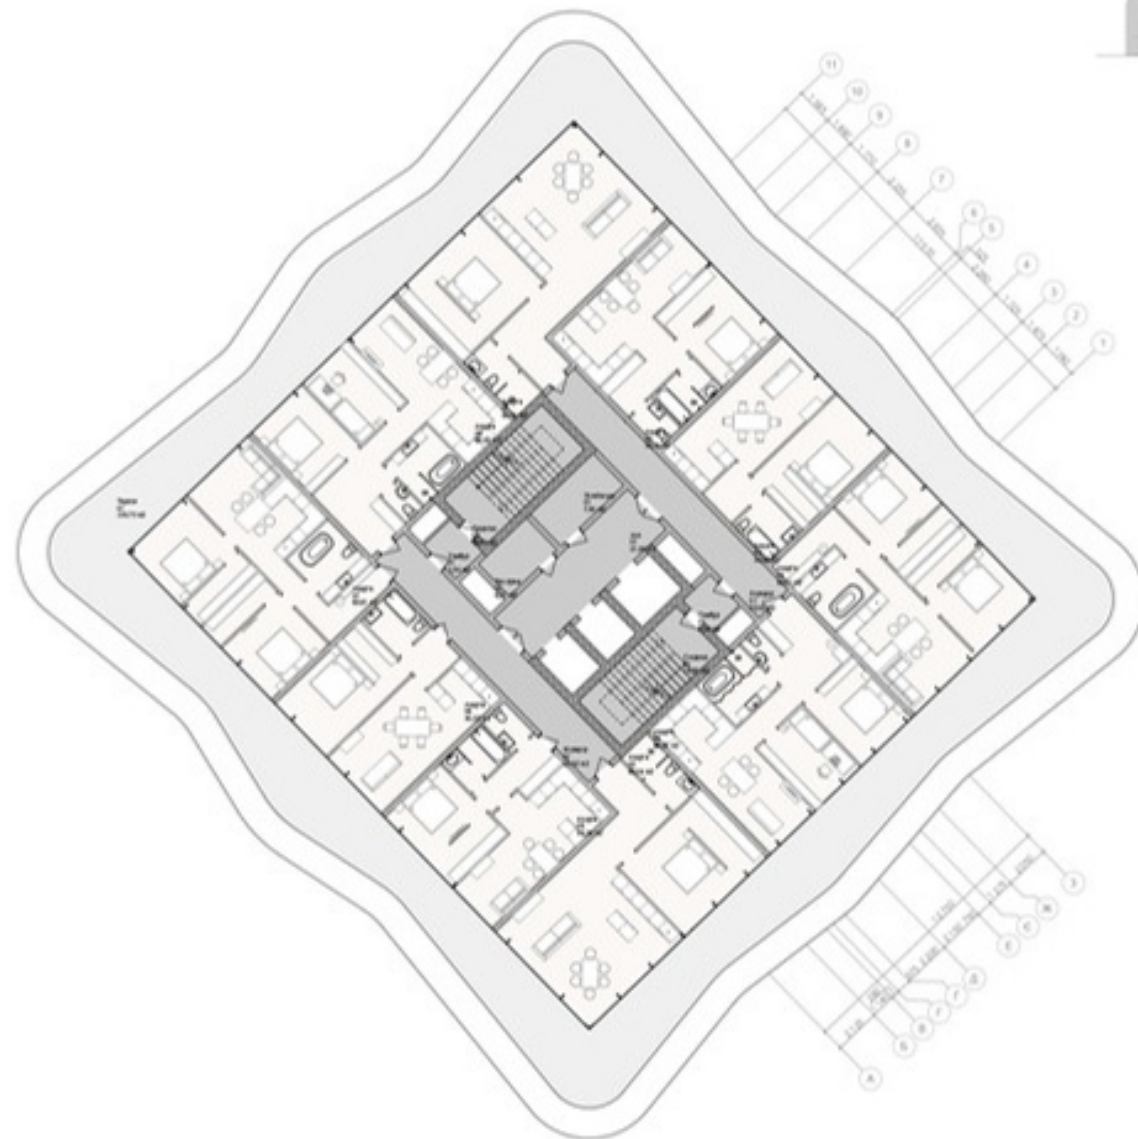

This is a conceptual project of a large-scale residential complex in the Lviv region. The complex, with a total area of 120,000 m2, includes 3 main towers with apartments, 2 side towers with hotels, restaurants and entertainment. Also under the complex is a 2-level parking lot and a huge SPA.

02 **Location:**
Lviv region
Area:
120 000 m2

PROJECT - 02

DETAIL EXPLORATION

Here are typical layouts, both for apartments in the central towers and for the hotel-type tower. You can also see the facades from several sides. I do all the drawings in ArchiCAD.

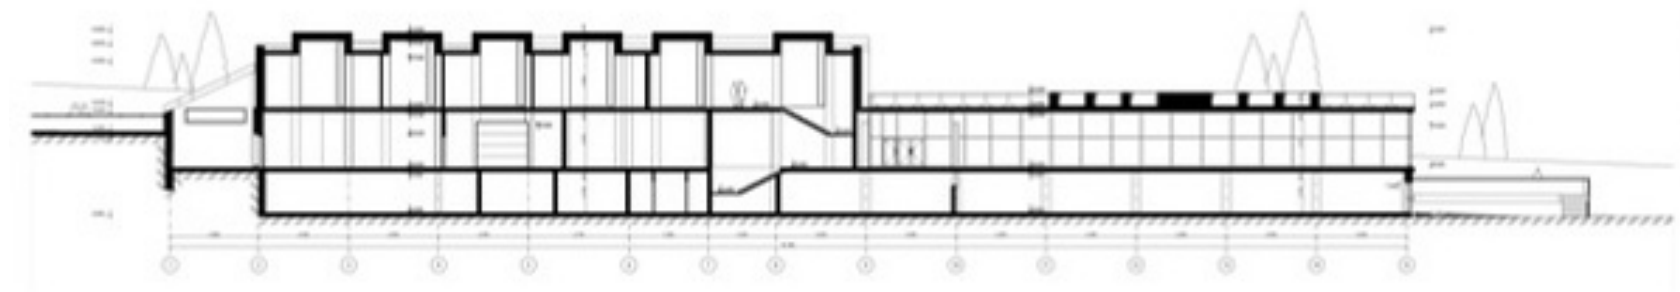

02

PROJECT - 03

SPA COMPLEX IN FOREST

This is a preliminary design of a SPA Complex in the forest in Ivano-Frankivsk region. It is a 3-story building with several swimming pools inside and outside, several types of saunas, relaxation rooms, a bar and a cafe inside. The total area of the complex is 3,800 m².

PROJECT - 03

Since this is a sketch project, I decided to use artificial intelligence to create the visualizations for it. Although I am proficient in Lumion, I was interested in trying something new in the field of visualizations.

03

A detailed architectural line drawing of a modern building facade, showing various geometric forms, windows, and structural elements in a perspective view.

LET'S BUILD THE FUTURE TOGETHER!
