# Allegro AI Parser
+ ERP + eBay Posting

The Ultimate Automation
Solution for E-commerce

Extract - Manage - Sell

- Scrape Allegro despite restrictions
- Organize & manage inventory in ERP
- Auto-post products on eBay

The Challenge – Allegro Blocks Scrapers

Allegro has implemented strict security measures to protect its marketplace from automated data extraction. Public API access is now limited, making it difficult to gather product information for resale. Traditional web scrapers fail because they are easily detected and blocked by Allegro's advanced anti-bot systems. Additionally, frequent website structure changes disrupt data collection, causing inconsistencies and loss of valuable product information. Without a smart solution, businesses relying on Allegro data face major operational challenges.
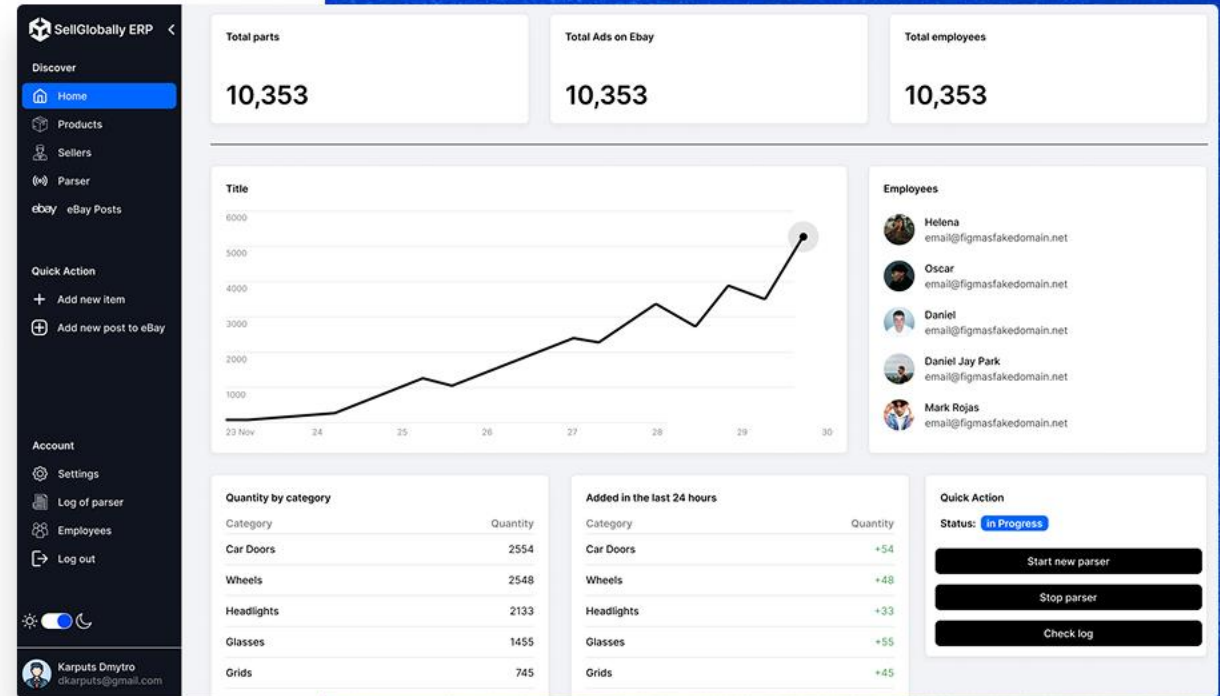

# AI-Powered Allegro Parser – Key Features

Allegro

AI Parser

ERP

ebay

- Self-learning AI – Adapts to Allegro's updates
- Automated proxy rotation – Avoids detection
- Data structuring – Organizes information for easy use
- Multi-niche support – Customizable for various industries

ERP System – Inventory & Order Management

Once data is extracted from Allegro, it is automatically structured and imported into our ERP system. This allows sellers to efficiently manage inventory, track stock levels, and monitor pricing in real-time. With a centralized dashboard, users can analyze product trends, manage multiple suppliers, and streamline order fulfillment. The ERP system ensures that businesses maintain accurate records and avoid overselling, leading to smoother operations and higher profits. This solution eliminates the need for manual data entry and reduces human error, significantly improving overall efficiency.

- Bulk posting – Instantly list thousands of products.
- Automated price adjustments – Adjust for different markets.
- Real-time sync – No manual updates required.
- Cross-platform compatibility – Sell globally with ease.

eBay Integration – Effortless Product Listing

Why Choose Our Solution?

AI-driven, self-learning technology

No manual adjustments required

Fully automated workflow

Works despite Allegro's security
