OVERVIEW

Hi, I am freelancer and student at IT STEP University. First of all, I really like working on selfdevelopment and that's how I became a freelancer. After I passed the online course about HTML and CSS, I have got my first order when I was fifteen. Then I mastered PHP, CMS and frameworks as WordPress and Yii2. Now I practice Spring Framework and want to start developing some commercial project with team.

HARDSKILLS

- **Programming languages:** Java, PHP, Python, C++, SQL, JavaScript.
- **Java:** Spring MVC, Spring Boot, JDBC, Maven, Hibernate.
- **CMS:** WordPress (WooCommerce), OpenCart, Drupal.
- **Frameworks:** Yii2, Vue.js
- **Front-end:** HTML5, CSS3, bootstrap, jQuery, Ajax.
- **Databases:** MySQL, MongoDB
- **Design:** Adobe Photoshop, Illustrator
- + Git, English – Intermediate, web page optimization.

MY EXPERIENCE

FRONT-END

FREELANCE || 2015 – Present

HTML and CSS were the first technologies that I started to use in my projects. Initially, I haven't even known how to add fonts or make adaptation for my web page. However, eventually, I found out it and acquired new skills as Bootstrap and JS. So now I have already done over twenty projects and I'm used to work with Vue.js.

BACK-END – PHP (WP, Yii2...) FREELANCE ||
2016 – Present

My first customer on freelance was back-end developer and he was looking for someone who will make layouts. He was coding on PHP, so I started too. When I started to learn Html/CSS at IT STEP Academy, I had already known it and my [teacher](#) offered me a job. It was one of the biggest projects (expectful.com) that I have ever worked. I was getting sketches and then made templates for WordPress. I had been working on it for six months until the project became too large for WP. Also, I had project on Yii2 (workshop585.com.ua), and it's funny that deploying took longer than development.

JAVA

IT STEP University || 2018 – Present

I learned about java by university lectures and studied it really well. So, I got 100 points! Our final project was telegram bot (@W_585_bot). Now Spring Framework is being studied by myself. Also, I have a project at university (medical cards).
