

# ILLUMINATES

## About us:

Due to the fact that our team includes experts in analytics, packaging, development, and promotion of blockchain projects since 2016, we are able to accurately determine current trends and market trends, forecast future market needs, and place capital in the areas that will give the best results.

Our investment strategy is based on market cycle knowledge, market structural analysis, and various authored methods for determining the best time to enter and exit the market.

We allocate capital to assets such as:

1. BTC
2. ETH
3. Altcoins and Startups promoted by our company

## Why us?

We have taken into account the most common mistakes made by private and institutional investors and hedge funds.

We understand how to gain more profitably than existing strategies, operating on both uptrends and downtrends as well as in situations of uncertainty.

Our ability to modify our strategy in response to swiftly shifting global trends benefits our investors greatly.

With our robust business model, we see ourselves as an industry leader in two years and would be delighted to share this experience with you.

## We offer

We manage funds of private investors and companies, applying our investment strategy for a medium-term investment horizon.

## Problem

In order to feel confident in the market you need to have enough experience, knowledge and time.

Mismanagement of capital leads to loss taking, capital loss, and mental stress

Investors lack the in-depth knowledge of market patterns and mechanics and a comprehensive trading strategy that is required to continuously remain profitable.

## Investment packages

### Short term

Term: 1 month

Profit: up to 7%

### Long term

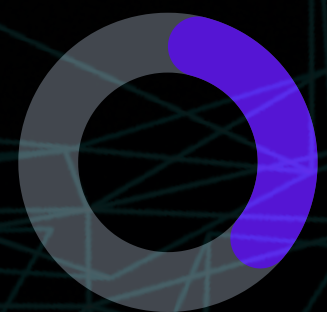

Term: 1 year

The possibility of following the portfolio progress in weekly reports with the representation of the projects invested.

The level of profit is not limited.

Our income is provided by profitability from commissions from transactions. In our case, the income is distributed in the ratio of 40 to 60%, where 40% is the investor's return
