Stockholm: Program Testing and Code Review

Software revision: 19

Organizational structures

- Timecard: OK
- Use of code repository: OK
- The burn down table: very good, but it's not up to date.

Program Testing

Following listing is according to the Software Requirements Specification.

- Functional Requirements
  - 1. OK
  - 2. OK
  - 3. OK
    - Nice to have: If protocol is removed from configuration file, then it is not mentioned in the report.
  - 4. OK
  - 5. Almost Complete
    - At least the file path of the machine readable report xml should be on the standard output, when all tests fail.
- Non-functional requirements
  - 1. OK
  - 2. OK
  - 3. OK
- Documentation
  - A User's Guide Missing
  - Technical documentation OK
    - Not very useful regarding the implementation style. Business logic in the forms class, methods should be private or protected. Only public methods are documented. But it's ok for this project.
