iMinds

iMinds is a modern educational platform which aims to provide online courses. It is distributed to a large range of customers all over the world. This in turn can be a solid foundation for creating and managing start-ups and other ambitious projects.

REQUIREMENTS

The task was to import the course content from another platform and create a web page that could be user-friendly and make the whole educational process, from subscribing to obtaining results, equally easy and smooth on big and small screens. Another important thing we had to go through was arranging user roles and permissions and establish different access levels for each part of the website.

WHY DRUPAL WAS CHOSEN FOR THE PROJECT

Content management system is very handy
Drupal flexibility is essential for custom functionality development

STORE

Now, user can see the price of the course and buy it.

USERS OVERVIEW

Admin and other users can overview users grouped by classes.

REVIEWS SYSTEM WITH PRE-MODERATION

The moderation system includes some post-moderation features, including deadlines after which users cannot submit learning data.

MULTIPLE INSTANCES

We allowed the platform to be used by almost a hundred clients on different domains. One client may also have multiple sites, depending on time. Clients usually have a dedicated site for a particular course.

BACKBONE.JS USAGE

We used Backbone.js for the front on mobile and some features on a regular site.

METISMENU USAGE

We used the jQuery menu plugin for creating a collapsible menu with animated accordion effects and auto collapse support.

GIT PROJECTS STRUCTURE

Each module resides in a separate project.

AUTOMATIC TESTING

We also used automatic testing for some modules.

CONFIGURABLE FRONTPAGE

The frontpage is highly configurable and consists of blocks of predefined types, which can have images and text on it. A custom solution is used for that.

RESPONSIVE DESIGN

This is for importing courses from other platforms. You can import courses from other platforms by pasting url of that courses. All of a child's materials will be

AEGIR

Development process is based on Aegir system.

JENKINS

Jenkins is installed to allow continuous integration.

USER ROLES AND PERMISSIONS

Users have roles on global level, and OG groups have their own roles. Access to each part of the site varies. User roles and permissions are arranged well. At the client's request, we made a configurable front page, which consists of blocks of predefined types. They can have images and text on it.
