## SUMMARY

I am eager to work with a growth oriented and responsible organization that will enable me to execute my education abilities through my dynamic performance. Currently ready to work as PHP or full stack PHP/Vue3 developer

## TECHNICAL SKILLS

Proficient in PHP/Laravel development using mysql. Have good knowledge in front-end technologies: JS, HTML, CSS, Tailwind, Vue3. Also have good knowledge of OOP, programing patterns, GIT, different APIs, DDD, TDD, Linux, algorithms, node.js. Have experience with Docker, Vagrant.

## EXPERIENCE

### Self-employed (September 2016 – February 2017)

Did some freelance tasks

### SolidBrain (February 2017 – January 2018)

- Made different improvements of existing code (laravel, magento 2, opencart, WP, yii 2)
- Developed new application parts using Laravel, jQuery, Ajax
- Integrated APIs (Facebook, Twitter, Github) to grab and publish data from social media profiles
- Worked on building admin side dashboard

### Lextools (January 2018 – September 2019)

Made big CRM from scratch using Laravel framework, Jquery, HTML, CSS, Bootstrap (multidomain website include API). I was a developer of API, and developed logic to some domains. Also I made tests for API (HTTP and Unit), refactoring and supports others domains (which I didn't develop). Consulting with DDD and TDD other team members on other projects. Later developed a system for synchronizing and exporting data between the system and documented SDK for other developers.

### Synchroworks Consulting (September 2019 – September 2021)

Made back and front part of big sms platform with virtual phone numbers. Also did the site transfer from CakePHP to Laravel using Vue.js + Tailwind in front.

### Underdefense (January 2022 – May 2023)

PHP (Laravel) project related to cybersecurity

### SSSCIP (March 2022 – now)

Doing tasks for State Service of Special Communications and Information Protection of Ukraine

### Survivor Game

It is my own project. During COVID I had a problem getting together with friends to

play board games, so I implemented “Бункер” board game with new features and realtime using laravel, mysql, redis, node.js, vue3, tailwind, inertia.js

## **EDUCATION**

**Lviv Polytechnic National University. Institute of Computer Science and Information Technologies. Direction “Software Engineering”**

September 2014 - 2019
