

# Server Security Hardening & Best Practices

*Service Description:*

I provide **comprehensive server security hardening** to protect your infrastructure from attacks, ensure compliance, and improve overall system resilience. Implement the best security practices using advanced firewall solutions and server management techniques.

## What I Offer:

### 1. Firewall Rules:

- Configure and manage **Sophos**, **PfSense**, or **OPNsense** firewalls to control network traffic securely.

### 2. Patch Management:

- Keep your servers updated with the latest security patches to protect against vulnerabilities.

### 3. Secure Services:

- Harden server services and protocols to reduce attack surfaces.

### 4. Audit & Logging:

- Implement auditing and logging to monitor server activities and detect suspicious behavior.
