

How I Work with AI in Everyday Professional Tasks

01

My Approach to Using AI

AI as a Professional Assistant, Not a Shortcut

I use AI as a structured assistant that supports my thinking, not replaces it. Every output is reviewed, refined, and finalized by me.

Process First, Tools Second

My focus is not on individual tools, but on workflows. I choose different AI systems depending on the task: analysis, writing, editing, research, or video production.

Human Judgment at the Core

AI helps me work faster and more clearly, but decisions, tone, and responsibility always remain human. This approach allows me to maintain quality, consistency, and professional standards across all projects.

02 Using AI to Improve Writing Quality

ChatGPT — Core Working Assistant

What I use it for:

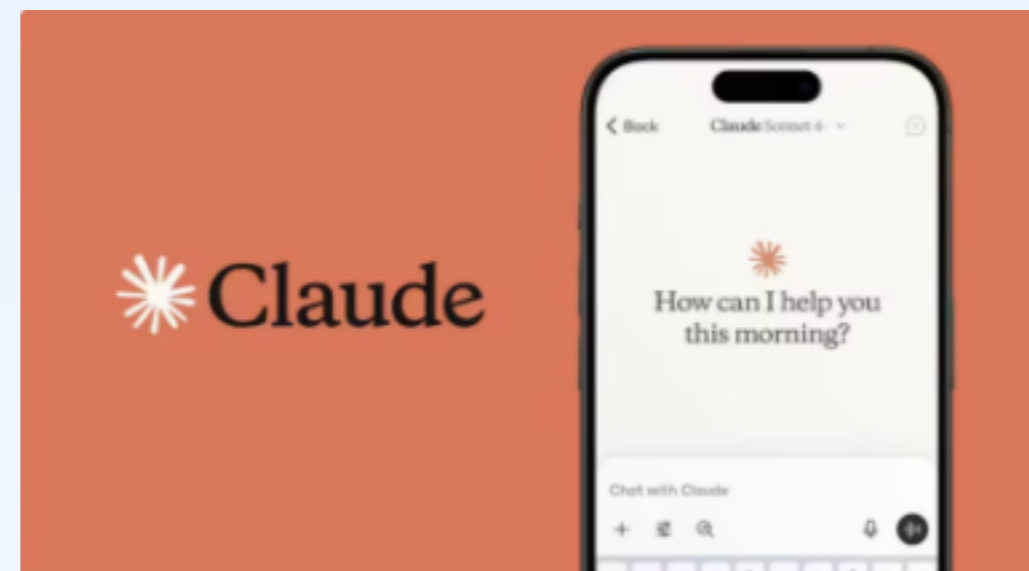

I use ChatGPT as my main thinking and writing partner. It helps me structure ideas, rewrite drafts, improve clarity, and adapt tone for different audiences. I treat it as a smart editor and analyst, not a final author.

Claude — Long Text & Style Precision

What I use it for:

Claude is my tool for working with long texts, logic, and nuance. I use it to refine structure, preserve meaning, and keep a consistent style in complex or sensitive content where precision matters.

Gemini — Fast Research & Multilingual Support

What I use it for:

Gemini supports quick research, comparisons, and multilingual tasks. I use it to cross-check facts, explore alternative phrasing, and work efficiently with content across different languages.

03 How I Use AI to Edit and Enhance Video Content

CapCut — Fast Editing & Subtitles

What I use it for:

I use CapCut for quick video editing, auto-subtitles, and social-media formats.

AI helps me cut clips faster, generate captions, and adapt videos for different platforms without manual work.

 **CapCut**

Descript — Text-Based Video Editing

What I use it for:

Descript allows me to edit video by editing text.

I use it to remove filler words, clean speech, restructure content, and quickly refine interviews or spoken videos.

 **descript**

Runway — Visual Enhancement & AI Effects

What I use it for:

Runway helps me improve visuals using AI.

I use it for background removal, object cleanup, and simple visual enhancements when clarity and presentation matter.

 **runway**

04 Using AI to Create Slides & Presentations

Presenti AI — Structured Slide Generation

What I use it for:

I use Presenti AI to quickly build structured presentations from text or ideas. It helps organize content into clear slides, maintain logical flow, and save time on formatting.

PopAI — Fast Drafts & Idea Expansion

What I use it for:

PopAI helps me generate fast presentation drafts from prompts or documents. I use it to expand ideas, create slide outlines, and quickly explore different presentation angles.

Gamma – Clean Slides from Text

What I use it for:

Gamma helps me turn raw text into clean, modern slides. I use it to highlight key points, structure content visually, and create presentations without focusing on design details.

Beautiful.ai – Visual Consistency & Design Control

What I use it for:

Beautiful.ai helps me keep visual consistency across slides. I use it when layout, spacing, and professional design standards matter, especially for formal presentations.

Thanks :)
